CHAPTER I

INTRODUCTION

The subject of Eclipses and Lunations is not only of great interest but also of great importance to students and researchers in astrology.

The contents of this book are valuable to those who require an introduction to the subject, as well as instructions regarding procedure in application of lunations. This is one method of prediction.

Advanced students, also, should find the various tables useful for quick reference in horoscope or research work.

As there is a dearth of literature on the topic, this timely work should serve as a foundation upon which voluminous information may be developed regarding the influences expected and perceived from the effect of eclipses, made possible through the data and instructions which this book provides.

The author, Mr. Sam Bartolet, (in addition to supplying excellent tables of Eclipses and Lunations, and considerable information concerning them both astrological and astronomical) has answered requests of many persons by adding considerable matter of chronological nature. Many are interested in associating Biblical statements, events and times with celestial phenomena, and the author here makes alignments (or correspondences) in relation to scripture from "Creation," (or the beginning of this dispensation.) The leads he supplies should prove an avenue for interesting study by Biblical students.

But (interesting as such subject may be to many,) it is mainly in the field of astrology, and in relation to horoscopy that this book provides earnest students with valuable information for study, reference and application of some of the strongest vibratory influences to which this earth and its inhabitants are responsive, and to which wise men in all ages have looked for portents of "times to come."

The application of Eclipses and Lunations to horosocpes is of immeasurable value in the field of Natal and Mundane astrology, as well as in Astro-meteorology and Astro-pathology.

CHAPTER II

PREFACE

This edition of "Eclipses and Lunations in Astrology from 1900 to 1950" was compiled during the first term of President Franklin Delano Roosevelt's administration. The first edition was published in the spring of 1923, and public demand having been greater than expected, we were inspired to present the second edition which has been revised, enlarged and much improved.

Ancient astrology has presented undeniable facts in every cycle of time and throughout the ages, and, beginning with the Year of Creation* until the present cycle, if we place those facts side by side with the Word and Works of God, we find a beautiful prophetic harmony. The late Mr. J. B. Dimbleby proved that all dates in Scripture and cycles of time, refer to planetary motion. The Earth completes its course around the Sun in 365-1/4 days. The Moon completes her course around the Earth with reference to the Sun, in approximately 29-1/2 days. The eclipse of Sun and Moon repeats its cycle in 649 years. The Lunar cycle repeats in 18 years, 10-1/3 days. The planet, Mercury, completes its course of transits every 92 years. Venus completes her course of transits every 486 years. The fixed star, Sirius, rises with the Sun once in 162 years, in September, or a complete cycle in 657 years, including the precession of the equinoxes and tropical year. By the aid of Mr. Dimbleby's discoveries, Mr. D. Parker calculated the cycles in Scripture, and made a chronological chart in astronomical time from Adam to Christ, to which we have added the present time, which points to a new dispensation.

To the previous edition, we have added lunations from 1933 to 1950. Some may ask why the lunations antedate to 1900? So that, to any event, indicated by an eclipse, you may add nineteen years to obtain the time of the next events or conditions. Also for correcting any directional chart or directional points in nativities during those years. We have called attention to ancient astrology, relative to the importance of eclipses and lunations in the art of prophecying future events, and at the same time to offer a readily accessible means of ascertaining their approximate longitude, within a degree, for astrological forecasting. In nativities, without any complex mathematical calculations, you may investigate the matter yourself, by your own horoscope.

---

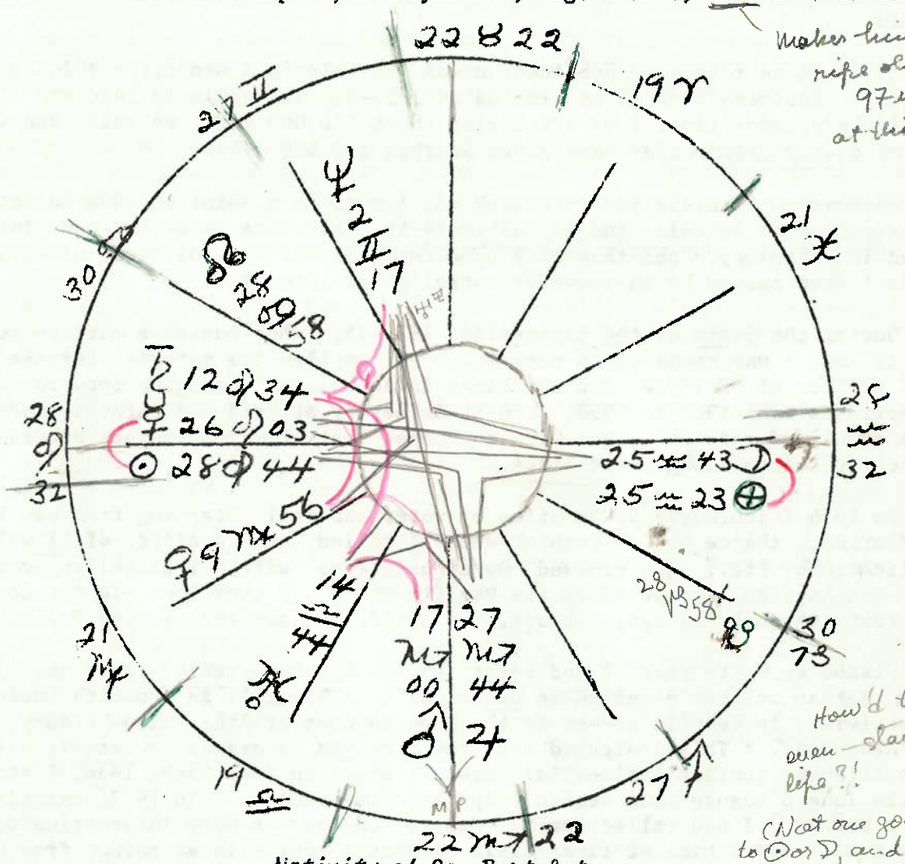
* A.M. or Anno Mundi, in the year of the world, that is, when creation is taken to be 4004 B.C.

BIOGRAPHICAL SKETCH OF THE AUTHOR

Many letters have been received, asking for the date of my birth and otherwise seeking acquaintance with me, so in answer to all those requests I offer this brief sketch of my life.

I was born at Williamsport, Pennsylvania, August 21st, 1888 at 5:20 A.M.

Make him a ripe old 97-years young at this moment!



Nativity of Sam Bartolet

How'd this guy ever stay in the life?!

(Near one good aspect to ☉ or ☽, and - ♀ combust)

My education has been acquired mainly through experience and travel. My father and grandfather were carpenters, and, after considering the practical advantages and amount of travel possible in that line of work, I cast my lot with the carpenters.

After considerable moving about, I finally landed in Spokane, Washington, where I followed my trade. Later, business took me to Canada and Alaska.

age 26 In 1914, I decided to study astrology for my own amusement! and the eclipse of August 21st of that year falling on my birthday, gave me new impetus.

... maybe it's the really frustrated ones who turn to Astrology — as a last desperate course in a washed out life .... like I did.

I worked at the Exposition in San Francisco in 1915; later was called to Panama, then to New York, and back to Williamsport. In 1918 I was drafted as a mechanic in the United States army, and sent to Vancouver where I worked in the ship yards after the war.

The year 1919 took me to Lily Dale, New York, where I made my first public appearance in the interests of astrology. The next year found me at Oceanside, California, where I assisted in the construction of the Rosicrucian Temple.

My first astrological publication was "Bartolet's Almanac, for 1924 to 1928" in 1922. Business took me to Florida in 1925-6, and again in 1930 and 1936. Until the present time, I have traveled about 100,000 miles by rail and water, and my sturdy automobiles have added another 100,000 miles.

Wherever my travels and work took me, I made it a point to take advantage of astrological schools and to cultivate the acquaintance of persons interested in astrology, and thus many opportunities for accumulation of worldly goods I have passed by in favor of astrological intereste.

During the years of the depression, 1929-35, when business matters moved slowly and I was hampered in many ways, I compiled the material for the second edition of "Eclipses and Lunations in Astrology," bringing forward dates of eclipses from 1900 to 1950, and it is hereby offered to earnest students as a means of reference, and with the hope that it may stimulate others to serious research along these lines.

In 1936 I journeyed 9,000 miles by water and rail. Starting from New York to Florida, thence to California where I called at the office of Llewellyn Publications, Ltd., and renewed my acquaintance with Mr. Llewellyn George. From Los Angeles, I traveled up the Pacific Coast and back home via the northern route through Chicago, Detroit, Cleveland, Buffalo and Niagara Falls.

Please turn to page 21 and refer to the Lunation table for June, 1936. Note that an eclipse occurred in Gemini 27°. This fell in the 11th house of my nativity, in benefic aspect to the Moon on cusp of 7th; also Mercury, Sun and Ascendant. This indicated that the time was favorable to travel, visit, make friends, contact influential persons, etc. On June 29th, 1936, I started the long pleasure and health trip beforementioned. In 1917, exactly 19 years before, I had called on Mr. George and had a very interesting visit with him. About time of first visit, I took a course in astrology from him. During my second visit to his institution, we laid the plans for publishing a new edition of "Eclipses and Lunations in Astrology" - and between the covers of this book are the results.

Regarding the effects of this lunation as related to my nativity, please see chapter headed, "Effects of Eclipses and Lunations in Relation to House Cusps," page 19.

CHAPTER IV

ASTROLOGY AND ASTRONOMY

Science defined means "Knowledge of principles or facts systematically arranged, in order to be conveniently taught, easily learned, and readily applied."

Astronomy is the science of the heavenly bodies: The Sun, Moon, Planets, Comets and Fixed Stars. It treats of their magnitudes, motions, distances, constitutions, etc. Descriptive astronomy explains the causes of the various phenomena observed (as of day and night, the seasons, tides, etc.) Practical astronomy relates to the means for acquiring astronomical knowledge by use of instruments and mathematical calculations, (such as times of transits, etc.) From astronomy, we learn that the last transit of Mercury across the Sun's disc occurred November 10th, 1927, 5:46 a.m. The next transit will be in May 1937. The last transit of Venus was December 6th, 1882; the next one will be June 7th, 2004. The last heliacal rising of the fixed star, Sirius, with the Sun was in 1753 A.D. The next rising of this star with the Sun will be on May 12th, 6084 A.M., at 4:16 a.m. (This is equivalent to 6086 A.D.) The tenth eclipse cycle of 649 years began in 1843...

Astrology is the science of the heavenly influences as related to the earth and its inhabitants. It has seven branches as follows: Genethliacal, State or Mundane, Medical (Astro-Pathology), Esoteric, Horary, Agricultural and Astro-Meteorology.

Before the present system of measurements was used, and after, astronomers disagreed by four millions of miles in the distance of the earth from the Sun, (that is, from the times of Dr. Halley and Mr. Proctor;) also over Ptolemy's and the Copernican systems.

Professor Dimbleby (about the year 1896) said that neither the opening chapter of Genesis, nor the science of astronomy were understood. "I knew," he said, "that the detection of an error, (if it existed,) would destroy all Biblical chronology, because time is proved by transits. All past year (dates) are obtained by eclipses and the years of the world by Solar Cycles."

Astrology and astronomy are as true now as ever before. They were given to us, as one science, by Ptolemy and other learned men, (which has long been regarded as the most sublime of all sciences, eminently calculated to illustrate the wisdom, power and goodness of a Supreme Being; to elevate and expand the human mind, and to fill it with exalted views of the Creator.)

In ancient times, astrology was science, religion and art combined, and (as such) has outlived all sectarian bigots and religious hypocrites.

3 April 65

CHAPTER V

ECLIPSE DEFINED

Astronomically, an eclipse is the interposition of a dark celestial body between a luminous one and the eye; or the passing of a luminous body into the shadow of another body.

Eclipse of the Sun always happens at New Moon, and eclipse of the Moon at Full Moon. The reason for this is that the Moon cannot be between us (the Earth) and the Sun except at the time of her change, or New Moon; and she cannot get into the Earth's shadow, to be eclipsed herself, except when she is in opposition to the Sun, which is at Full Moon.

If the Moon's orbit lay exactly on the plane of the ecliptic she would eclipse the Sun at every change, and be eclipsed herself at every Full Moon; but (as her orbit departs over five degrees from the ecliptic,) she may be either above or below the Sun at the time of her change, or above or below the Earth's shadow at time of Full Moon.

Eclipse of the Sun always comes on from the west, and passes over eastward; while eclipse of the Moon comes on from the east and passes westward. This is the result of the eastward motion of the Moon in her orbit.

Eclipses are of two kinds, namely, those of the Sun (which must happen when a New Moon falls within 12° 24' of the Moon's Nodes,) and those of the Moon (which must happen when there is a Full Moon within 18° 36' of the Nodes.)

Lunar eclipses may be penumbral (according to whether the Moon's limb enters the penumbra only), *partial* or *total*. They are *central* when Moon passes centrally through the shadow. Solar eclipses may be *annular*, *total* or *central*.

Effects of Eclipses

In judging effects of an eclipse, such significators as are nearest the angles show the events decreed. The nature of the stars in accordance with the eclipse, (planets as well as fixed stars,) and also the appearances coascending, are likewise to be considered, and judgment is to be given accordingly.

Eclipses may operate very unfavorably in a horoscope when they fall in conjunction with, or opposition to, any important points (such as the Sun, Moon, malefic planets, the ascendant, meridian or nodes,) and other sensitive points or parts of the natal horoscope. On the other hand, if they fall in sextile or trine aspect to the Sun, Moon, ascendant or midheaven, when in conjunction with the benefic planets, Jupiter or Venus, and sometimes Neptune, the action is favorable. The influence is strong only when in harmony with the directions in action at that time. When no directional aspects are in operation, transits often bring eclipses into operation.

Periodicity

An eclipse repeats itself after 19 years in the same degree of the zodiac, so this must be taken into consideraton when making predictions. An eclipse

may bring direction into action, so must be considered in connection with the progressed horoscope.

Orb of Influence

When an eclipse occurs within five degrees of any planet, ascendant or midheaven, close to a malefic planet or Moon's Nodes in a (nativity,) it generally signifies accidents.

In (Mundane) Astrology, eclipses operate more powerfully when visible, and the effects are in proportion to the number of digits eclipsed.

We have observed that the last Solar eclipse of a Lunar Cycle has an undeniable influence for the cycle of 18 years, at the beginning and ending, at the place visible.

The "Gentile Times" end in 1914, which gives us the key to things that prophecy has set to come, (such as the World War, Jews' return to Palestine in the cycle of 1914-32.) The Solar eclipse of 1932, (visible in America,) "will bring" the Israelites (elect) to America in the cycle of 1932-50. Israel and Judah (God's Kingdom) at Jerusalem during the cycle of 1950-68.

Note - future tense used... and it was official in — 1948 !

In (Mundane) astrology, no eclipse can threaten a scarcity or plague to the whole earth, nor can the pestilence continue more than four years in one place. Eclipses are said to operate more forcibly on cities and countries than on individuals.

If an eclipse occurs during the time a comet is visible, it usually foretells the birth (or death) of some eminent person or powerful ruler.

Very reliable effects of Solar and Lunar eclipses may be observed by noting the decan in which the eclipse occurs. (See chapters on "Effects of Solar and Lunar Eclipses by Decanates.")

The duration of an eclipse depends on the amount of time of obscuration, (which shows as many years for hours of obscuration in Solar eclipse, and months in Lunary eclipses.)

A Solar eclipse in Taurus, Leo, Scorpio, or Aquarius (the fixed signs), will last for several years; if in Aries, Cancer, Libra, or Capricorn (the moveable or cardinal signs), the effects are over in a far more brief space of time; but if in Gemini, Virgo, Sagittarius or Pisces (the common signs), the effects commence much sooner, and continue for a long while in force, and affect mankind far more powerfully.

The Significator

In (nativities,) the potent effect of an eclipse or lunation (falling exactly on place of a significator - in opposition, sextile or trine,) will be noticed when planets transit these points.

The ancients used only the conjunction and opposition, but later observations include the square, sextile and trine aspects; also parallels.

The ancients had only eclipses, transits and the new moons from which to make their predictions; later on, directions were used.

Value of Eclipses as Portents

The ancient astrologers used only eclipses and the transits of the planets to guide them in their study of astrology, and they were able to trace definite connection between the changes taking place in the heavens and the course of human events. The significance of an eclipse having been determined by its sign position, usually comes to pass exactly at the time when one of the major planets afterwards makes its transit, more so by conjunction or opposition. Transits of solar eclipse last for years; lunar eclipse for months.

4 April 5

CHAPTER VI

LUNATIONS

Their Principal Effects

When a lunation falls on the place of the Midheaven, Ascendant, Sun, Moon, or planets, it has an influence on the events in the following month. The Moon's directions are the impellent forces of the eventual Sun's directions. The latter may begin to work when a Moon's direction of about the same nature begins to operate. If there are no Moon directions that can do this, a New Moon can bring it into action, if it falls in aspect to the Sun or to the planet aspected by it in the radical horoscope.

Thus a Moon direction may also be brought into action by a New Moon, if this lunation is of about the same nature as the aspect. The action usually reaches its maximum at Full Moon.

If it is opposite in nature to the directional aspect, the aspect may be delayed in coming into action, and even become partly inoperative. This is especially the case when the action of the Moon-aspect is contrary to that of a Sun aspect prevailing at the same time.

The influence of New Moons may usually be relied upon to give some indication of the course of events during the ensuing month. Observe the place of the New Moon, and note the aspects it forms to the radical positions of the planets. The nature of the events may be determined by the house positions of the planet in aspect to the New Moon, and also whether it be favorable or unfavorable by aspects. In this respect, the trine and sextile are good and the square and opposition are adverse, while the conjunction will operate according to the nature of the planet involved.

It frequently happens that the New Moon does not fall on the place of, or in aspect to, any planet at birth, in which event the ephemeral positions of the planets themselves are significant. Consequently, if a New Moon appears not to have any special significance by its position as regards the planets' places at birth, it should not on that account be dismissed without further consideration, for if at the time of the New Moon any of the malefics should fall on the places of the significators, they will be found to have more than ordinary transit effect, enduring for a full month in their influence over that sphere of the life, indicated by the planet or significator so affected.

Transits over eclipse positions affecting the significators will have the maximum effect, according to the planets concerned. Planets that become stationary when in the act of transit over either terminal, that is, the radical or directional place of the significator, have greater effect than those that are direct, in that department of life indicated by the planet or significator so affected. In this sense, Mercury relates to the intellectural life, mental faculties, business, trade, journeys and general activities. Venus may be significator of domestic and social affairs. Venus also indicates sisters, and Mars indicates brothers. Jupiter indicates uncles and Mercury indicates aunts. The Sun denotes the father, and the Moon the mother. Saturn also sometimes indicates the father, and Venus the mother, etc. Uranus indicates uncles and the grandparents, or scientific people. Neptune indicates cripples or mystical friends.

The seventh Full Moon after autumnal equinox (September 20th) has great martial and spiritual significance. It is the seventh month (Nisan--April) of the Sacred Calendar, the beginning of the astrological year when the Sun is in Aries. (See chapter on "Ancient Chaldean and Hebrew Solar Cycle.") The fifteenth day of the seventh month is Full Moon according to the ancient Hebrew calendar. At the seventh Full Moon all of the United States wars began, the Israelites left Egypt, and Christ was crucified on the fifteenth day, at Full Moon, (no eclipse). The Son of God went out by his death, total darkness over the whole land until the ninth hour (from sunrise) or 3 p.m. After the great tribulation (Matth. 24:29) total darkness will occur in the world without an eclipse, then the world will have three great lights, the Christ Spirit, Sun and Moon.

"Who is this that darkeneth counsel by words without knowledge?" Job 38:2

SOLAR ECLIPSES

According to Ancient Astrology

(It is said that Calisthenes, on entering Babylon after its conquest by Alexander in 3672 A.M., was shown a record of eclipses which had been observed in the city by astrologers for 1903 years.)

Effects of Solar Eclipses in the Decanats of Each Zodiacal Sign in Relation ot Mundae Astrology.

ARIES

Eclipse in the first decan: War, tumults, sedition and controveries; excessive drought.

2nd decan: Imprisonment and sadness of some king or great man; corruption of trees and things growing on the earth.

3rd decan: Grief and sadness to men, death of great women, and destruction of cattle.

TAURUS

First decan: Afflictes trade and business, and destroys the food crops of the earth.

2nd decan: Causes danger to travellers, and those that are with child.

3rd decan: Pestilence and famine.

GEMINI

First decan: Denotes dissension, strife and sedition among humans, neglect and contempt for the laws of God and man.

2nd decan: Causes piracies, thefts and murders.

3rd decan: Death of great men, and many troubles to the people.

CANCER

First decan: Denotes trouble for women, changeable weather.

2nd decan: Dries up rivers, wantonness among women.

3rd decan: Sedition, pestilence and much disease.

LEO

First decan: Denotes death of famous men, and scarcity of corn.

2nd decan: Troubles and anxieties to kings and great men.

3rd decan: Motions of armies, death of kings, danger of war and scarcity of rain, churches suffer. (Ill for Europe 1914-32).

VIRGO

First decan: Denotes great calamity,and death of some king or great writer. (Ill for American 1932-50.)

2nd decan: Famine, pestilence and sedition.

3rd decan: Great troubles and adversity to artists, poets and writers.

LIBRA

First decan: Corrupts the air and causes scarcity and dearness of corn.

2nd decan: Denotes death to king or great men, seditions and famine.

3rd decan: Troubles among nobility and detriment to their estate.

SCORPIO

First decan: Causes war and slaughter, tumults, hate and treason

2nd decan: Mischief to some king averse to war.

3rd decan: The rise of a tyrant; idleness and slothfulness of the former king, hateful to all.

SAGITTARIUS

First decan: Causes dissension and hatred among men.

2nd decan: Death of camels, and such cattle as chew the cud.

3rd decan: Variously effects horses and armies.

CAPRICORN

First decan: Unhappiness and evil to great men, and the rebellion of nobles and common people.

2nd decan: Stirreth up mutiny of soldiers against their commanders.

3rd decan: Tumult of activity in the kingdom and causeth famine.

AQUARIUS

First decan: Causes public grief and sorrow.

2nd decan: Public robberies, thefts, outrages, earthquakes and famines.

3rd decan: Death and slaughter of sheep and beasts of the field.

First decan: Dries up rivers and makes the sea-coast unfortunate.

2nd decan: Causes the death of some famous and great men, destruction of fish, and causes earthquakes.

3rd decan: Denotes the sedition, fierceness, cruelty and inhumanity of soldiers.

"There is a man in thy kingdom, in whom is the spirit of the holy gods; and in the days of thy father, light and understanding and wisdom, like the wisdom of the gods, was found in him; whom the king Nebuchadnezzar thy father, the king I say thy father, made master of the magicians, astrologers, Chaldeans and soothsayers:

"Forasmuch as an excellent spirit and knowledge, and understanding, interpreting of dreams, and shewing of hard sentences, and dissolving of doubts, were found in the same Daniel, whom the king named Belteshazzar: now let Daniel be called, and he will shew the interpretation." Daniel 6: 11-12.

CHAPTER VIII

THE SAROS

The Saros, known to astronomers as the eclipse period, was first mentioned by the Chaldeans, who were able to predict Solar eclipses by observing that the same eclipse occurred again after 223 lunations, or new moons. Some may argue that such predictions were not always accurate, but the statement is more apparent than real, whilst most of the inaccuracy alleged arises from our imperfect and unnatural modern time.

The Saros, or period of 223 lunations, amounts to 18 years and 10 to 11 days; but as our modern form of years was unkown to the ancients, who observed lunar years, the triple Saros was a period of 54 years and one month, which is three times 223 lunations.

In the first 18 years, the eclipse that occurs on the 3rd of January, 1927, will take place in the second 18 years on the 14th of that month; and in the third 18 years it will be seen on the 25th; so that in the fourth series of 18 years it will have gotten into February.

Beginning solar years when the Sun is not on the line of the equator, is comparatively only a modern venture. It is plain that the Antediluvians began their year as recorded in Gen. 1. The Chaldeans did so, and the Hebrews observed the same point throughout Scripture. It is only when history comes down to the year 3,000 A.M. that we find a departure by some nations from nature and revelation. We have an express command in Lev. 23:24, stating when the new lunar year is to be observed. The beginning of the seventh sacred month is near the autumnal equinox on the first day of the first civil month.

CHAPTER IX

LUNAR ECLIPSES

Their Effects by Decanate

ARIES

First decan: Denotes fevers, incendiarism, and dryness of air.

2nd decan: Pestilence.

3rd decan: Abortive birth, incommodities, and danger to women.

TAURUS

First decan: Death and disease among cattle.

2nd decan: Death of queen, scarcity of seed and produce.

3rd decan: The serpents and creeping things are affected.

GEMINI

First decan: Threatens incursions and rapines of enemies.

2nd decan: Brings sudden motion of armies and commandeering of private and public things.

3rd decan: Death of some illustrious man.

CANCER

First decan: Excites and stirs up wars.

2nd decan: Grievous exactions, intolerable tributes, tax burdens.

3rd decan: Brings death to female sex; sudden destruction and miseries.

LEO

First decan: Brings the sudden infirmity of some king; or death of a great man.

2nd decan: Journey of king, and mutation of things.

3rd decan: Stirs up the people and armies to new attempts.

VIRGO

First decan: Causes sickness to the king, seditions among men.

2nd decan: Great damage to counsellors and scribes.

3rd decan: Causes diseases among human beings.

First decan: Provokes furious storms of hail.

2nd decan: Pernicious to every one.

3rd decan: Threatens the death of great men.

SCORPIO

First decan: Horrible thunder and lightning and perhaps an earthquake.

2nd decan: Dries up olives and fruits, and causes fevers and pestilence.

3rd decan: Sharp sickness, with many seditions, quarrels and slaughters.

SAGITTARIUS

First decan: Brings thefts and rapines.

2nd decan: Destruction to horses and mules.

3rd decan: Causes pestilence and many evils among mankind.

CAPRICORN

First decan: Causes conspiracies among men and the lamentable murder of a great man.

2nd decan: Frequent incursions and assaults of soldiers, robberies and captivities.

3rd decan: Death of some king, and also sedition.

AQUARIUS

First decan: Shows sickness of some king.

2nd decan: It universally hurts the seed of the earth.

3rd decan: Causes change in all things.

PISCES

First decan: Brings sorrow to priests and religious houses.

2nd decan: Death of some great illustrious person.

3rd decan: Threatens robberies and promiscuous rapines both by land and sea.

EFFECTS OF ECLIPSES AND LUNATIONS

In Relation to House Cusps

In Conjunction with the Ascendant

Changes, tendency to colds and slight illness affecting the head or face.

(1st and 7th cusps)

In good aspect: General good fortune, favorable changes, travel, pleasant associations and friendships.

In adverse aspect: Many annoyances, liability to illness or accidents; unfortunate travel and unfavorable changes, from the 7th house.

Midheaven

(10th and 4th cusps)

Good aspect: Increased popularity and responsiblity; new business, beneficial changes of occupation. Journeys; favorable domestic conditions.

Adverse: Unfavorable changes, discredit, loss of employment, death of parent.

To 2nd and 8th Cusps

Relates to financial interest,death of relatives, concern regarding money of others.

To 3rd and 9th cusps

Changes and traveling; much correspondence, dealings with relatives and strangers.

To 6th and 12th Cusps

Liability of illness and confinement or hospitalization; danger of loss by theft or inferiors; business losses through enmity, large institutions such as hospitals or places of confinement.

To 5th and 11th Cusps

Increase of pleasure; new friends; love affairs or flirtations; pleasurable associations.

References to the New Moon in Scripture: Samuel 20:5, Psalm 81:3, Ezekiel 45:1, Isaiah 66:23.

CHAPTER XI

THE 18-YEAR LUNAR CYCLE

There were two total eclipses of the Sun in Creation year, 0 A.M. This beautiful and geometrical position is one of the six physical evidences of the "beginning"(given to us by Moses in Gen. 1:14, 19), and the cause of the solar and lunar years starting together. The eclipses occurred on the 1st day of the 4th and 10th months, as follows:

1 2 3 4 5 6 7 8 9 10 11 12 months

⊙ ⊙

As an eclipse reoccurs after 18 years and 10-1/3 days, or 54 years and 1 month (3 times 18) by natural years, it moves through the years in twelve-month stages in the course of 648 years (12 X 54 = 648). This extra month forms another year, so that the cycle of 648 becomes 649 years, after which an eclipse repeats its date. In this way, we can trace past eclipses from the 1st day of the 4th month in creation year. It will give us the number of past eclipse years to the present time. The following chapter shows the 18th and 54th years from Creation; every third line of table (omitted) is a 54 year. Although an eclipse may sometimes just miss to occur after 18 years, yet that is its place and will be taken on some future date. Dates of eclipses of the 54th years, however, are sure.

The 10th eclipse cycle of 649 years, (9 X 649 = 5841 A.M., or 1843 A.D.) begins the 10th eclipse cycle. 18-year Lunar Cycles end in 1914 and 1932 A.D. and foretell the tribulations (as stated in Matth. 24:6-15.) We now follow the first pair of solar eclipses from creation until Feb. 24, 1933 A.D. (Whoever lives until after the 6th lunar cycle, 1932-50, will see Jerusalem the capital of this world, with one Holy Church and Government to rule the world in peace as prophesied.)

well - they sure got Jerusalem to be capital of their own little world — at least — And it came 2 years before 1950 —

CHAPTER XIV

NEW AND FULL MOONS

The New or Full Moons may in some cases fall a day or so from the date given in the tables, but this does not detract from the value of the tables for reference.

A new Moon is in force for one month, but is modified by the Full Moon which has a secondary influence, especially when it occurs within five degrees of important points in a horoscope.

Eclipses in Relation to the Chart of Birth

An eclipse falling on any planet in the birth map is of great importance and is usually adverse, as it cuts off the things signified by that body in the radical map. The effects of an eclipse of the Sun are said to last for as many years as the eclipse is hours in duration, and those of the Moon for as many months as the lunar eclipse is hours in duration. Eclipses are good or adverse according to how they fall in a nativity. During the period of its duration (months or years) the eclipse effects will be felt whenever stimulated by directions or transits, and the most marked effect will always occur when a planet is in transit over the eclipse point, the nature of the effect being shown by the nature of the transiting body. The house and sign of the radical map in which a New Moon falls will always be affected, and the nature of the effects may be judged by the aspects made by the New Moon to the radical planets, and also to planets in the progressed map.

It is presumed that those who purchase a book dealing with eclipses and lunations are versed in the principles of astro-science and understand how to judge their effects in relation to the natal and progressed horoscopes.

In mundane astrology, the Chaldeans, for example, made the astonishing discovery of the Saros, a period of 223 lunar months, (or in our calendar eighteen years and ten to eleven days.) The eclipse of August 21, 1914, visible in Europe and Asia, had a predecessor in that of August 9, 1896, that was observed in Japan. On August 31, 1932, the total eclipse of the Sun, (at the end of another 18 year lunar cycle,) was visible in United States and Canada, (indicating many "calamities" during the next two years,) and until Saturn transited the eclipse in April, 1935. The next total eclipse of the Sun occurred on February 3, 1935, (visible on the Pacific Ocean.) Two total eclipses will be visible in the United States on July 9, 1945 and June 30, 1954, respectively.

THE CHALDEAN

AND ANCIENT HEBREW SOLAR CYCLE

It Gives the Day of Week for All Dates of Scripture

This cycle of 15 years began with 1722 A.M., thus following the Antediluvian Cycle, the last seven years of which ended in 1721.

The Antediluvian Solar Cycle
(See following chapter)

All the figures are 7th (or Sabbath) Days, our modern Saturday, which is the original and right Sabbath Day.) To construct the seven solar cycles, proceed as follows: Table a for the 1st year, d for 2nd year, g for the 3rd, h for the 4th, i for the 5th, j for the 6th, k for the 7th solar cycle years. The Solar Cycle is composed of seven lunar years (of 354 days each, or 12 revolutions of the Moon.) As the Moon completes a revolution around the earth in 29=1/2 days, the ancients alternately used 30 and 29 days for their months to keep up with her movements, and thereby began every month with a New Moon. Therefore, if we mark (on a piece of paper) each 7th day, we shall write all the figures here printed. Thus in the first month, we have 7, 14, 21, 28. These were the seventh (or Sabbath) Days. (It is a Sign between me and the children of Israel forever. Ex. 31:17.) There were 30 days in the first month. Therefore 2 are left over. As 5 more days added to the 2 would be another seventh day, the first Sabbath Day in the second month would fall on the 5th of that month, so that the seventh days of the second month are 5, 12, 19, 26. There are 29 days in the second month, (because the months have alternately 30 and 29 days.)

"In every respect, the cycle is of the best and highest astronomical character," said Dimbleby. "and its working is as true now as it was, more than 4,000 years ago."

The reason why the ancient Chaldeans made this solar cycle 15 years (by cutting out 6 years from a cycle of 21) was to make it work in 360, which (is 24 times 15, like the globe of 24 meridians of 15 degrees each.) The 6 years cut out were those between (i) and (j).

After the flood in 1656 A.M., all the dates of Scripture, together with their day of week, are found on this cycle.

The A.M. years are obtained by subtracting the B.C. years from 4004. Thus, 1491 B.C. was the Exodus year, and (when deducted from 4004) gives 2513 for the A.M. year, which in this case is correct. This solar cycle (of 15 years) however, shows that the B.C. and A.D. dates are not so reliable.

Regarding the explanation of this solar cycle, it is well to state that it is 15 lunar years, lettered from a to o, and having an extra (or intercalary) month at the end of each third year. This extra month consisted of 34 days, (which were required to make lunar time equal to solar.) The lunar year is 354 days, while the solar is nearly 365-1/4, hence, there is a deficiency of more than 11 days in each lunar year, so that in three years, the deficiency

being 33 days, another month is added. Thirty-four days were, however, not the correct quantity for this intercalary month, so, in order to adjust lunar and solar time, a day was added to month in table i, which is the ninth year.

In using the solar cycle for Biblical purposes, the seventh month must always be called the first of the year. (According to Divine command, Exodus XII:2, which refers to the exodus of the Israelites in the seventh month 2513 A.M.) See Table 1. Therefore, the seventh sacred month is the first civil month, and so on. The intercalary month had no number, but it is a very useful feature in Biblical Chronology, as it is often referred to in the pages of revelation. Unlike the English Solar Cycle, the Biblical one is never broken up.

To find Sabbatic year, divide A.M. years by 7. If nothing over, which is the case with all seventh or Sabbatic years = Jubilee year of rest.

To find A.M. Years, subtractt1722 A.M. from 5922 A.M. and divide by 15, in this case none over. (Table ⓐ 1924, Solar Cycle began for 15 lunar years on September 20th.)

The 18-year lunar cycle total eclipse began 1st of February (5th month) in 5895 A.M. or 1897 A.D.

A.M.	
0	Date of Creation, September 20th (table a), Gen. 1:3.
2083-1/2	"Abraham sojourned" 15th day of 7th month, (table a.)
2132-1/2	Abraham offered up Isaac on 15th day of 7th month. (l)
2513-1/2	Israelites left Egypt on 15th day of 7th month. (l)
3996	Jesus Christ born 25th of the 3rd civil (Dec.) month. (j)
4029-1/2	Christ was crucified on 15th of the 7th month. (m)
5930	New Year's date for 1932 A.D. = the 7th of April. (i) Dispensation ends with Full Moon, 15th day of the 7th month, 1932.
5931	Jewish era began September 29, 1932.

Note abbreviations in following table:
D, number of days in month; C, civil month; S, sacred month.

1932 - A CYCLE YEAR

We read in St. Luke 21:25, "And there shall be signs in the Sun, and in the Moon, and in the Stars; and upon the Earth distress of nations, with perplexity; the sea and waves roaring."

This prophecy tells us that "signs" mean cycles of time, eclipse cycles! Prophecy confirms that nobody knows the day or the hour for the end of the world, which indicates the end of *the cycle known as the Christian Age.* Since 1914, which ended the Lunar Cycle as presignified 2520 years ago when Jerusalem dwindled and Babylon came up to rule the world, the world has apparently not moved forward. Aw, come on, baby! The Babylonians didn't have electronic calculators to count their Zoras cycles with...

This is not so. we do know now.

We know that the Sun and Moon come together every 29-1/2 days, and after a period of 19 years they form the conjunction, again in the same point of the zodiac (eclipse), and therefore on or close to the same day of the year. In 57 years, or 19 X 3, there are 20,819 days and just 705 lunations. Then in 285 years (astronomical period), or 15 X 19, there will be 3,525 lunations. These 285 years are marked off on the prophetic cycle as 285 days, at the rate of "a day for a year" as defined by Scripture prophecy and astrology. Please observe that 15 years is the Ancient Chaldean and Hebrew Solar Cycle, and 19 years is the later Luni-Solar called Metonic cycle. Now as this Solar cycle started with the year 1722 A.M., table a, (1721 finished the Antediluvian Cycle), you may find any subsequent year by adding 15 to the first year, table a, until you reach the year desired... Should it be a year less than 15, count the years one by one until you reach the intervening year, (i.e., 5930 A.M. or 1932 A.D.O. Subtract 1722 years from 5930 A.M. and divide remainder by 15. In this instance, there is a remainder of 8 years. Turn to the Solar Cycle tables and count eight from table a. Use table i for the year 1932, table h for 1931, g for 1930, etc.) Dates of lunations are given in chapter 13. Starts pg 23, and finishes pg 48

Note! ... where comes the "Five" given thee a day for a year" thing.

Sepharial once explained as follows: "I have been asked why the Passover date of 1932 is given as April 21st instead of a month earlier, seeing that the Full Moon takes place after the Vernal Equinox in March. In ordinary years, this would be the Passover date, but 1932 is an intercalary year, and a 13th month, Ve-Adair, is inserted to restore the calendar to the Sun's position. Hence the New Year's date will be April 7th, 1932, and the Passover will be on April 21st in that year."

Brought forward to our times, the Hebrew Solar Cycle began on September 20th, 5922 A.M. The Sun was on the equinoctial line on September 23rd, which was the "fourth day" of the new Solar year. The equivalent English year, 1924, began early in the fourth month (January) of this first year of the Hebrew Solar Cycle, which was then 5922-1/4 A.M., or 1924 A.D. (table a)

4004 1918 +6

The Chaldean astronomers (ancient astrologers) discovered the regularity of the reoccurrence of eclipses after a period of 18 years and 10 to 11 days. How they arrived at this result, we do not know, as eclipses are not always visible in Babylon, or in any other single place. The *18 year Lunar Cycle* began on Feb. 24th, 1933. The tenth eclipse cycle of 649 years began in 1843, the same as Creation Year, and is called Solar Eclipse no. 1. "Creation Year"

Holy Sh-- ! My pre Natal eclipse point was exactly 10 days before I was born (and getting me a D △ ☉ on top) ... !

takes place at the completion of each of the 36 sections, (by which we know that the period between each is 223 lunations or 18 years, plus 10 or 11 days, making a total of 649 years for the completion of the zodiacal circle.) The dates for the end of 18 year Lunar cycles, are calculated by the United States Astronomical Council and Department of the Nautical Almanac. My purpose is to show the day, hour and minute when the Solar eclipse ended the 18 year Lunar cycle on August 31, 1932. In the new Lunar cycle (beginning Feb. 24th, 1933) a war, or calamity, will start, because the influence indicated will cause people to fight! Like Cain, man will rise up to slay his brother. America will be an important world influence. And? On 8 days after this date, Roosevelt closed all the banks, precipitating one of the worst financial calamities in history. (And - it could well have been concerned on the very date in question - 8 days previous.)

THE LUNAR YEARS ARE SCRIPTURE

THE NATURAL SOLAR YEAR

"According to ancient history and the Bible, the years and dates (of which are all related to planetary motion,) the natural solar year begins with the Autumnal Equinox in September. Modern custom begins the year with January 1st, but it is unnatural (and unscientific,) and (although it would be difficult to alter the calendar now, yet we should understand the true form of the year when we deal with history and astronomical calculations. Our modern civil year is not applicalbe to scientific and historical use." Dimbleby.

There had actually been a very good reason for inserting the two months January and Febrary

After the Exodus, and before the 2nd Series of world Catastrophies - during the time of Jashua (walls of Jerico, etc), the year had fallen into a length of exactly 360 days, making it easy to use 10 months of 36 days. Then the months were numbered from one to ten. (Today only the last four months still retain their old names ie September is 7th in Greek = Oct. 8, Nov. 9, and Dec 10)
Some time after the Jashua Tribulation (which, by the way, was exactly 52 years after the Moses Tribulation), the Astrologer-Priests once again set about getting the calender in order, and to this end, inserted two new months at the EAST - of the Sacred Calender.

24 May 90

CHAPTER XVIII

PAST - PRESENT - FUTURE

CHRONOLOGY

Date of ten eclipse cycles, etc., in A.M. Years, comparing Scripture events with Astronomical data from Creation to "Everlasting Kingdom."

what happened to 8 years?

B.C.	A.M.	
→ 3996	0	September 20th, the date of Creation, according to Dimbleby, true Astronomical time. All cycles start together: Eclipse Cycles, etc. Gen. 1:16. Adam, the first man, created. Gen. 1:27 Eve, the first woman. Gen. 2:23.
	1	Transit of Mercury, complete in 92 years.
	42	Transit of Venus, complete in 486 years.
	70	Cain born. Gen. 3:13
	77	Abel born, Adam's son.
	129	Cain slew Abel; the first murder. Gen. 4:8. First city, Enoch.
	162	First rising of Fixed Star Sirius with the Sun (See chap. on Fixed Stars.)
	360	First Ecliptic Circle of 360 years.
	649	First Eclipse Cycle of the Sun and Moon. = FIRST JUBILEE Gen. 1:16.
	687	Methuselah born.
	930	Adam's death; the fall of all men until the veil is lifted, when man will live a thousand years and beyond.
	1298	Second eclipse cycle = 2nd Jubilee Antediluvian Patriarchs, Adam to Noah
	1656	Gen. 7: "And the Lord said unto Noah.....for yet seven days; (This was the 10th of the second month, Sabbath Day) and I will cause it to rain 40 days and nights." First dispensation ended with the flood.
	1657	Antediluvian period ended. Gen. 8:5.
	1722	A Solar Cycle of 15 years commenced. - a "short" cycle?
	1834	Pyramid built. (According to Dimbleby's reckoning.)
	1947	Third eclipse cycle. = 3rd Jubilee

When Adam and Eve were 70 years old!?

- catechysmic upheaval of the earth?

B.C.	A.M.	
	2006	Dynasty of Egypt commenced. Noah died.
	2066	Dynasty of Babylon commenced.
	2077	Assyrian Kingdom commenced.
	2083	Abraham began "the sojourn" on the 15th day of the 7th month.
	2094	Ishmael born.
	2107	Sodom and Gomorrah destroyed.
	2108	Isacc born.
	2168	Esau and Jacob born.
	2433	Moses born. Acts 7:23-40.
	2513	Children of Israel left Egypt on the 15th of the 7th month. The 12 tribes in the wilderness under Moses and Aaron, the high priest, for 40 years.
	2553	Death of Moses, the Israelite's first return to Palestine.
1575		First Jubilee. (70th jubilee = 70XX 50 or 1925 A.D.)
	2596	Fourth eclipse cycle.
1116	2883	Samuel, the first prophet.
1095	2909	Saul annointed King by Samuel. 1. Sam. 11:12.

Time before 1722 A.M. kept by Antediluvian 7th year Solar Cycle. The 8th year is the first year of a new 7-year cycle. From 1722 on by 15 year Solar Cycles. The science of Astrology-Astronomy was of great importance in those days, and Moses was well acquainted with the science as taught in the Egyptian Court.

1095	2909	Saul reigned 40 years. I Sam. 28:19.
1055	2949	David ruled 7-1/2 years over Judah, 2 Sam. 1.
1048	2956	David ruled 33 years over Israel. 2 Sam. 5.
	2963	(Everlasting Kingdom) Jer. 31:31-40.
1015	2990	Solomon became king of Israel; ruled 40 years. (Solomon's Temple started in fourth year of his reign. I Kings 1.
1004	3000	Temple was completed, House of God. I Kings 6:1.
1003	3001	Temple dedicated. I Kings 8:2.

B.C.	A.M.	
975	3029	Solomon's death.
	3030	Rehoboam, king six months; revolt of the ten tribes. Kingdom of Israel under Jeroboam in Shechem.
	3245	5th jubilee
721	3284	18 Kings and Prophets ruled Israel 254 years, until the ten tribes were taken into captivity by Assyria. 2 Kings. 17:23.
975	3030	The House of Judah at Jerusalem under Rehoboam.
	3245	Fifth Eclipse cycle of 649 years.
609	3395	Jeremiah's prophecy against Jerusalem. Jer. 24.
606	3398	Nebuchadnezzar takes Jerusalem. 2 Kings 24.
	3406	Jewish Times, 2520 years, began; end 1928 A.D.
588	3416	Jerusalem destroyed. Zedekiah taken to Babylon in the 9th day of the 4th sacred month, Friday. (table o) 2 Kings.

3416-3/4 Solar Cycle ends.

Gentile Times began 3376-1/2 A.M.
Gentile Times end with lunar cycle 1914 to 1932 A.D.
According to some prophecies, last date given in the Scriptures is 1934 or 1937 which indicates the fall of great nations; Jews and Jerusalem benefited. Gentile Kingdom began with Babylon, Medes-Persians, Grecian and Roman Empires (1260 years). Dav. 7:3.

	3470	Gabriel visited Daniel. (table i) Dan. 9.
	3488	2nd Temple at Jerusalem finished.
	3894	6th Eclipse Cycle of 649 years. = 6th jubilee
	3995	Virgin Mary visited by Gabriel. (525 years after Daniel's visitation.)
A.D.		
0	3996	Jesus Christ, born on 25th of the 3rd civil month (December). (table j).

B.C. and A.D. years are confusing. Usher's years (4000 B.C.) overlap 4 years. From the year, 0 A.M., (Anno Mundi, the year of Creation according to Dimbleby) until birth of Christ = 3996 years. Dimbleby proved dates in the Scriptures by Solar Cycles, etc. Natural years are used as made by the Sun, commencing with autumnal equinox(See 1752-5751)

	4026	Christ baptised and His Ministry commenced.

4029-1/2 Christ crucified on 15th of the 7th month (table m).

A.D.	A.M.	
70	4069	Jerusalem and second Temple destroyed by Titus.
	4096	St. John banished to Patmos; end of first Christian Church.
	4126	Ptolemaic system of Astrology and Astronomy prepared. First written scientific work, to this day considered masterly copy of Ptolemy.
321	4543	Constantine established Sunday as Roman Sabbath.
476		The fall of Roman Empire. Dark age began.
622		Mohammed the prophet, wrote the Koran.
	5192	8th eclipse cycle of 649 years.
1378		A great mystic and spiritual leader born, Rosenkreutz. (Several Orders of Rosicrucians exist today.)
1492	5488	Columbus discovered America.

We follow the first eclipse at creation, 10th eclipse cycle. 9 X 649 = 5841 or Jan. 1, 1843. Add 54 years = Feb. 1, 1897; add 18 years = Feb. 14, 1915; add 18 years = Feb. 24, 1933, when new Lunar cycle of 18 years began.

1752	5751	English Parliament, in 1752, ordered the next year to begin with January (New style calendar) which was going in the wrong direction. Thus 1-1/4 years were added before 0 A.M. hence January, 1930 A.D. is equivalent to 5928 A.M., and September, 1930 A.D., which commences the Solar year, is 5929 A.M.
1776	5774	Independence of United States declared from all Gentile crowned heads, so U.S. could be free from European alliances. There will be another declaration in the year 1937. A.D.
1830 + 1843 =	5828 + 5841	New religion, The Mormon Church, by prophet Joseph Smith. "Book deposited, written upon gold plates," story of two Jewish tribes, Nephites and Jaredites, under the leadership of the prophet Lehi, who had left Jerusalem 600 B.C., for America. 9th eclipse cycle of 649 years (Closed)*
1896	5894	Lunar cycle ends. People began to investigate science. The Redding Prophecy Book, "Our Near Future" takes in the world war at end of cycle, which ends the Gentile Times. (Mr. Dimbleby's astronomical work on "line of time" in the Scriptures in true planetary motion.) – Note – this is an 18 year cycle – not the longer Eclipse cycle – .
1914	5912	Lunar cycle ends; world war began (Dan. 12:1.) to break up Gentile rule. (Foretold in Matt. 24.) The fall of governments and institutions, dismembering of nations, rise of dictators. Other cycles end during this 18-year cycle.

* We are presently in the 10th Jubilee (eclipse) Cycle, and – nearing the close of the 8th Soros. 9th Saros starts 1998

A.D.	A.M.	
		U.S. enters world war, Russia turned bolshevik and Jerusalem taken in year 1917. Jews return to Palestine. Great tribulation began in Europe and travels eastward to America as cycle ends. In 1925, the 3500 years of Jubilee cycle ends. In 1927 the League of Nations adopted the dual force of Capitalism and Socialism of dying Gentile Times. In 1928 Jewish Time ends. In 1929 Jews murdered in Palestine, and Russia started five-year plan of State Socialism which indicates Gentile Times are over. In 1930 great eclipse in America, which indicates drought, afflicts trade and business, and damages crops. Great changes and alterations "will" take place all over world before the great cycle ends for another conflict.
1932	5930	Lunar cycle ends with solar eclipse on Aug. 31, 1932. Visible in America. Eclipse at the end of cycle has an important effect because Gentile Times are over, and this begins a new dispensation of time, which will be world wide, (and of course great men rise with the signs of the times.) Before the cycle ends in 1950 America will produce a Great Spiritual Man whom the world will finally accept after years of trouble. This cycle indicates another great war, which will bring man radical changes and destructions. The last date given in Scripture is 1934 or 1937 A.D. Fall of great nations of Europe and the United States involved. Many new states will be added to United States in this cycle, be the result of war or war debts. Anarchy will prevail all over the world before the cycle ends, which will change conditions everywhere. The Earth will change its position in the heavens, and it is said the Moon will break her umbilical cord from the Earth, which will cause great tribulation upon the Earth, by 1945-50.
1950	5948	This cycle begins with the World Peace by the end of Armageddon in Rev. 20:8. The Temple will be rebuilt about 1954-57. By 1960 Jerusalem will be the capital of the world. Israel from America and Judah united. Then Theocracy will supersede Monarchy, Democracy and Anarchy. REv. 22.

THE FIXED STARS IN ASTROLOGY

We consider the fixed stars valuable to astrologers for judging condition of the eyesight, and as indications of spiritual sight.

INDICATIONS OF SPIRITUAL SIGHT

When the Sun, Moon and Mercury are well aspected or in configuration with Saturn, Uranus or Neptune, (mundane aspects included);

When Saturn is sextile or trine to Uranus or Neptune; When Uranus or Neptune is placed in the Ascendant or Midheaven at birth.

When a fixed star of first or second magnitude is exactly on the Sun or Moon when culminating or ascending at birth, its influence is undeniable.

Certain fixed stars account for eminence of persons whose horoscope otherwise does not, especially when the star is culminating or in the ascendant, or when the lord of the ascendant is on the place of the following stars:

Alcyone (Pleiades) in Taurus 29; Assellus in Leo 7; Regulus in Leo 28; Antares in Sagittarius 8; Orionis in Gemini 27; Bungular in Scorpio 28.

INDICATIONS OF DEFECTIVE VISION

When the Sun or Moon is afflicted by malefic planets at birth, near the first four fixed stars in the foregoing list, it is an indication of blindness or diseased eyes. According to whether one or both luminaries are afflicted, so will the eyes be affected. The Sun rules the right eye of a male, Moon the left eye. For females reverse this rule.

The "Ephemeris of Eminent Fixed Stars" is for astrological purposes. The positions of the fixed stars are given in zodiacal longitude, although they are not in the zodiac, but in the belt of constellations surrounding the zodiac.

Sirius, the largest fixed star, rises with the Sun at the Autumnal Equinox once in 162 years.

To the foregoing we may add that "the light of time," that is, the Sun by day and the Moon by night, in conjunction with an eminent fixed start (Aldebaran, the Pleiades, Regulus, Acturus and Antares) brings honor or fame, but stars of a Martian or Saturnine nature are indications of accidents and misfortune.'

Earl Beaconsfield had the Moon in conjunction with Regulus in the 9th house of his nativity, December 21st, 1804, 5:30 a.m.

Napoleon had the Sun near Regulus and Arista ascending at birth.

According to the birth data we have of Mr. Henry Ford, he has Mars with Regulus at birth.

The late Sepharial and Mr. Pearce, modern astrologers, and ex-Kaiser Wilhelm of Germany, have the ruler of the Ascendant close to star in Scorpio 28.

The U.S. Horoscope (Gemini ascending) has the Sun with Sirius in 13 degrees of Cancer, and Regulus close to nadir, indicating that the United States of America will reach an exalted position in spiritual enlightenment.

EPHEMERIS OF EMINENT FIXED STARS

Positions for January 1, 1930

A ready means of determining the position of a Fixed Star for any other year is to add 50-1/4" per year to its longitude for years *after* 1930, and subtract that amount for each year *before* 1930.

Name	Long. ° '	Lat. ° '	Dec. ° '	Mag.	Nature	Effects
Diphda	1 ♈ 36	20S14	18S24	2	♄	Unfortunate.
Andromedae	13 19	25N41	28S38	2	♃ ♀	Honor and riches.
Mirach	29 25	25N56	35N11	2	♀	Prosperity in marriage.
Hamal	6 ♉ 40	9N56	23N05	2	♄ ♂	Evil bodily hurts.
Almach	13 15	27N28	41N56	2	♀	Eminent friends.
Menkar	13 20	12S35	3N46	3	♄	Ill fortune, hurts.
Algol	25 10	22N35	40N38	2	♄ ♃	Violence.
Alcyone	29 00	4N02	23N51	3	♂ ☽	Accidents, blindness.
Aldebaran	8 ♊ 48	5S28	16N21	1	♂	Riches or honors.
Rigel	15 51	31S07	8S17	1	♃ ♂	Honors or renown.
Bellatrix	19 58	16S50	6S16	2	♂ ☿	Wealth, militarism, civil or military honor; sudden dishonor; accidents, ruin.
Polaris	27 35	66N05	88N52	2	♄ ♀	Many troubles.
Orionis	27 46	16S02	7N23	2	♂ ☿	Good fortune.
Menkalinan	28 56	21N30	44S56	2	♂	Martial honors; disgrace, ruin, sometimes violent death.
Sirius	13 ♋ 07	39S35	16S36	1	♃ ♂	Glory and wealth.
Castor	19 16	10S05	32N03	2	☿	Mischievous; keen intellect.
Pollux	22 15	6N40	28N13	1	♂	Renown and eminence.
Procyon	24 49	16S00	5N24	1	☿ ♂	Fame and fortune.
Praesaepe	6 ♌ 15	1N33	20N15	0	♂ ☽	Blindness.
N. Assellus	6 33	3N11	21N45	4	♂ ☽	Sometimes death by accident or fire; defective vision.
S. Assellus	7 44	0N04	18N26	4	♂ ☉	
Leonis	26 35	11N52	23N48	3	♄ ☿	Mischievous.
Regulus	28 51	0N28	12N21	1	♂ ♃	Grandly liberal, independent, violence, military honor, imprisonment.
Zosma	10 ♍ 20	14N20	20N57	2	♄ ♀	Selfishness, disgrace, fear of poison, unreasonable.
Denebola	20 38	12N16	15N01	2	♄ ♀	Unfortunate.
Caphir (Virginis)	9 ♎ 10	2N48	1S00	3	☿ ♀	Courteous, refined.
Acturus	23 15	30N47	19N33	1	♂ ♃	Riches and honors.
S. Scale	14 ♏ 06	0N20	15S42	3	♄ ☿	Malevolent.

Name	Long. ° '	Lat. ° '	Dec. ° '	Mag.	Nature	Effects
N. Scale	18 ♎ 23	8N30	9S05	3	♃ ♂	Highly beneficent.
Bungula	28 36	42N34	60S30	1	☿ ♃	Beneficence.
Antares	8 ♐ 47	4N33	26S16	1	♂ ♃	Malevolent.
Polis	2 ♑ 14	2N21	21S04	4	♂ ♃	Ambition, success.
Sadalsund (Aquarii)	22 ♒ 25	8N37	5S35	3	♄ ☿	Unfortunate.
Fomalhaut	2 ♓ 52	21N08	30S02	1	♄ ☿	Fortunate and powerful yet causes malevolence of sublime scope and character.
Markab	22 30	19N24	14N46	2	♂ ☿	Fortunate, but danger of accidents and violent death.
Scheat	28 23	31N08	27N38	2	♄	Extreme misfortune.

A Solar day consists of 24 hours, at a mean rate, but a sidereal day is accomplished in 23 hours, 56 minutes and 24 seconds, the solar day being about 4 minutes longer. This slight difference of about 4 minutes daily between solar and sidereal time, amounts to one whole day in every fourth year of 365-1/4 days. Owing to the revolution eastward of the stars, it requires 366 revolutions of the earth, (as measured by fixed stars,) to make 365-1/4 days, as measured by the Sun. By consulting a star map with the Sun's path in the heavens, any one may see at a glance that most of the Fixed Stars have no parallels on the Ecliptic.

CHAPTER XXI

ZODIACAL AND PLANETARY DEITIES

Zodiacal Spirit	Degrees	Sign	Degrees	Planetary Angel	Planetary Ruler
Saratiel	1 to 15	Aries	16 to 30	Samael	Mars
Araziel	"	Taurus	"	Azrael	Venus
Saraiel	"	Gemini	"	Raphael	Mercury
Phakiel	"	Cancer	"	Gaphiel	Moon
Seratiel	"	Leo	"	Michael	Sun
Schaltiel	"	Virgo	"	Raphael	Mercury
Chadakiel	"	Libra	"	Azrael	Venus
Sartziel	"	Scorpio	"	Samael	Mars
Saritiel	"	Sagittarius	"	Zadkiel	Jupiter
Semaquiel	"	Capricorn	"	Cassiel	Saturn
Zakaquiel	"	Aquarius	"	Cassiel	Uranus
Vicabiel	"	Pisces	"	Zadkiel	Neptune

It is said that every person has a Planetary or Zodiacal ruler, according to the Time of month born. Those whose birthday falls in the first fifteen degrees of a sign, have a Zodiacal Spirit, while birthdays in the last fifteen degrees of a sign have a Planetary Angel. To illustrate, let us take the first sign of the zodiac, Aries, (which covers the days between March 21st and April 20th (approximately) of any year.) If your birthday is between approximately March 21st and April 5th, your planetary ruler of course is Mars, and your Zodiacal Spirit is Saratiel. If your birthday is in the last fifteen degrees of this sign (April 6th to 20th or 21st) your planetary ruler is also Mars, but you have a Planetary Angel instead of a Zodiacal Spirit, which for the last fifteen degrees of Aries is Samael. The remaining eleven signs are to be read in the same way. This data is offered to those who are interested along these lines.

---

cont'd from pg 60

...ere now are on the door step ...Aquarius (1998), then—

...rist's time entered the Age ...e Fish. (There was considera... ...earthquake and tribulation, ...t Pisces is a MUT sign, and so ...responds quietly—relatively)

...fore this, entered the Age of ...e Lamb. This was the Moses ...ibulation, and we can see ...m its description that it ...es a real bummer (Aries is ...CARD sign, and it is always ...violent, but over quickly.

...d—what did we have before ...is? The Age of the Calf, of course. ...—we heard nothing of this ...e in the Bible. (The story of ...h could have been a muffled ...o of sorts, but—the dates are ...ong...) And it appears that ...Creation Story is hypothetical ...ed only to project starting dates ...ck to—so Noah could have ...en an important remnant, and so—was included. We know also now that—for sure, the years were of shorter lengths then (though may be you could still keep count of the "cycles")

So then, when ever did start the—Age of Taurus? .....

No body knows. And though we have heard of—worshiping the golden "Calf," what ever did they worship in—the Age of Gemini?

we can now think even more about it. We note again:

Aquarius starts with the 9th lunation cycle in—the 9th (10th) Jubilee cycle

That one really gets us. NINE appears to be very important (The week had been 9 days long at one time—when the year had been 360 days long, and the month 36 days—why we had had only ten months in a year.) The Moses Tribulation had effectively upset not only the "tick-tock" length of the year, but also—the orbit of the moon as well. But—if we just stick to counting cycles, here's what we get—

649 years is one jubilee
while 18 years is one
Saros (lunation) cycle

So—if we divide 18 into 649, what do we come up with?

36 lunation cycles
in 1 jubilee—

and—
it takes four 9's to
make 36—

So—a complete trip around the Zodiac would take—a full 36 jubilees, while a quarter way round (from FIX sign to next FIX) would take—what?

Exactly 9 jubilees

We are—at this moment in the 9th jubilee, nearing the end of the 8th Saros. And—when it closes? We should be—only 1/4 way through the 9th jubilee, shouldn't we. (Correctly—the 9th jubilee ends in the year 2492 AD)

If so, then—theoretically Aquarius doesn't start till then either. (So what are we worrying about.)

Just now, we went back and checked. The 9th jubilee ended in 1843, so—it is now the 10th jubilee we are in, and just approaching its quarter (8 years left in the 8th Saros)

So—something's off. (and the reason the author made his predictions all too early, as ref: RP 60)
